Google Lens - Search What You See

When **Lens** returns results from other **Google** products, including **Google** Search or Shopping, the results rely on the ranking **algorithms** of those products. To ensure **Lens** results are relevant, helpful, and safe, **Lens** identifies and filters explicit results. These results are identified using **Google**-wide standards such as **Google** SafeSearch guidelines.

These Machine Learning Techniques Make Google Lens ...

Lens uses **Google** Translate's neural machine translation (NMT) **algorithms**, to translate entire sentences at a time, rather than going word-by-word, in order to preserve proper grammar and diction. For the translation to be most useful, it needs to be placed in the context of the original text.

Lens vignetting correction algorithm in digital cameras - ...

A **lens** vignetting correction method for use in imaging systems such as digital cameras employs a polynomial correction function $F = ar^2 + br^4 + c$, wherein r is a distance to a center of correction. A calibration image is obtained using the imaging system, then the correction function applied to the calibration image is least-squares fit to determine the variable coefficients a , b and c ...
