I have read the comments and incorporated that which makes sense to the author in my revision. To be honest, I see no general trends reflected in your comments about routine analysis errors. You are skating on thin territory yourself with number theoretic underpinnings.

If you are just unwilling to even try to grasp a harder math proof, then this is the point where relevance becomes relevant. Your comments definitely seem confused. Try harder, and come back again?

Maxie, we had an extensive conversation, in which I had promised the file. Nothing more needed to be said.

Research papers are read by an international audience. Rhetorical flourishes are a huge obstacle to readers who are non native speakers. Unfamiliar terms should be avoided, or defined.

Email etiquette is important. No subject, attache, plus title with signature does not an enlightened

conversation make.

In the future, if you do not understand a word in the English language, there exists such man pages called a dictionary:

<https://www.thefreedictionary.com/recency#:~:text=recency%20-%20a%20time%20immediately%20before,or%20appeared%20not%20long%20ago>

You will find that this term is used correctly in proper grammar. Mathematics is more subjective to judge many times.
